# Vakil.app — User Flow Diagrams

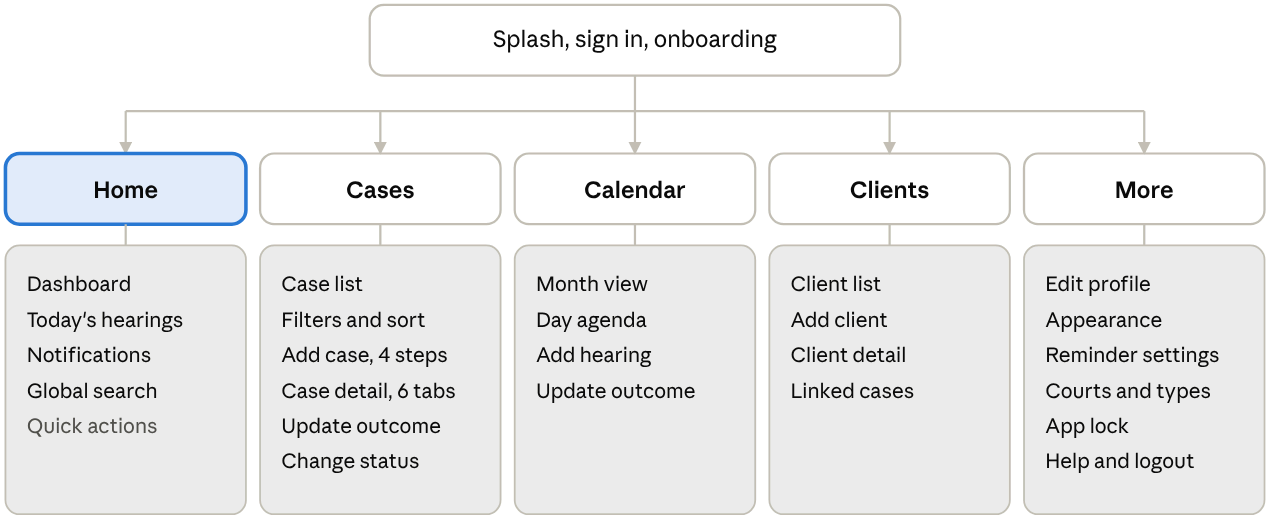

Oct 15, 2026 · @Harsh Vaghela

Five diagrams cover every v1 path the advocate takes, from first launch to recording a hearing outcome. Screen IDs (SCR-NN) match the FRS.

## App map

The advocate lands on Home after onboarding; every other screen sits one or two taps below a bottom tab.

**Five tabs hold every screen; create and edit open as modals**

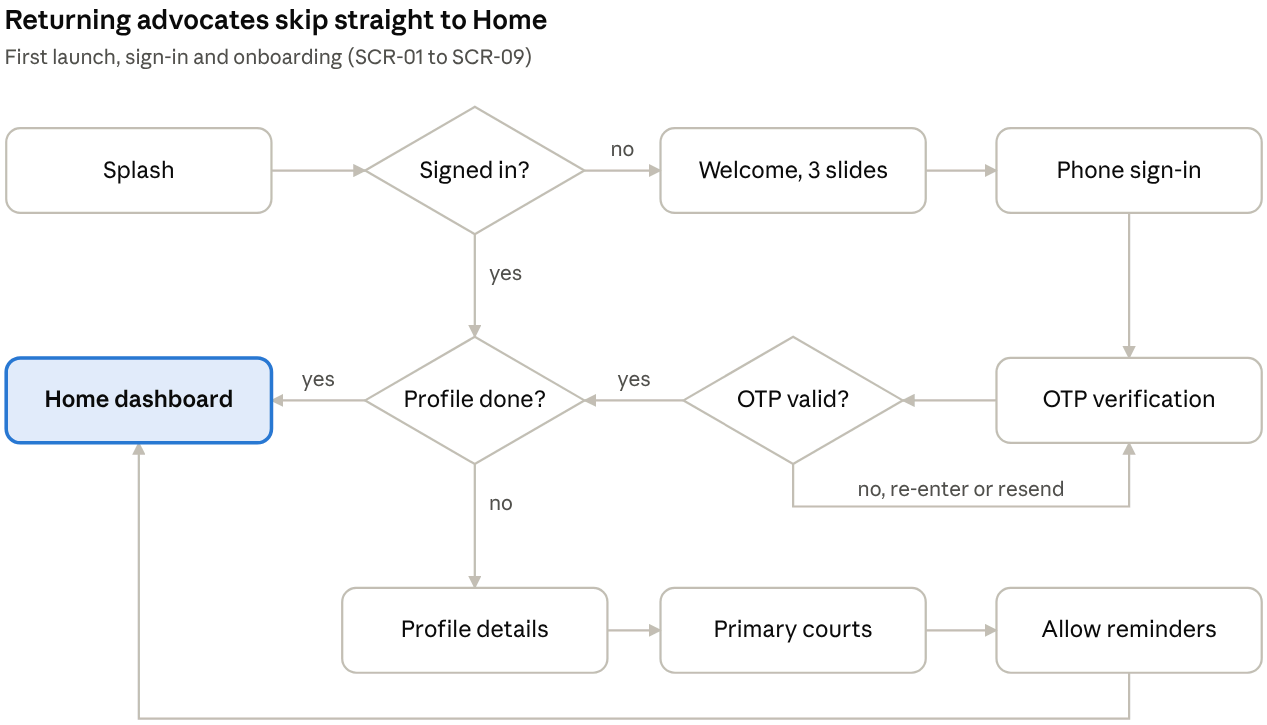

App map · 5 tabs and their screens

Modals (Add case, Add client, Edit) slide up over the current tab; bottom sheets (Update outcome, Filters, Change status) keep the context visible behind a scrim.

## Flow 1: First launch, sign-in and onboarding

A new advocate reaches Home in about 60 seconds: phone, OTP, name, courts, permission. A returning advocate with a saved session sees Home straight after the splash.

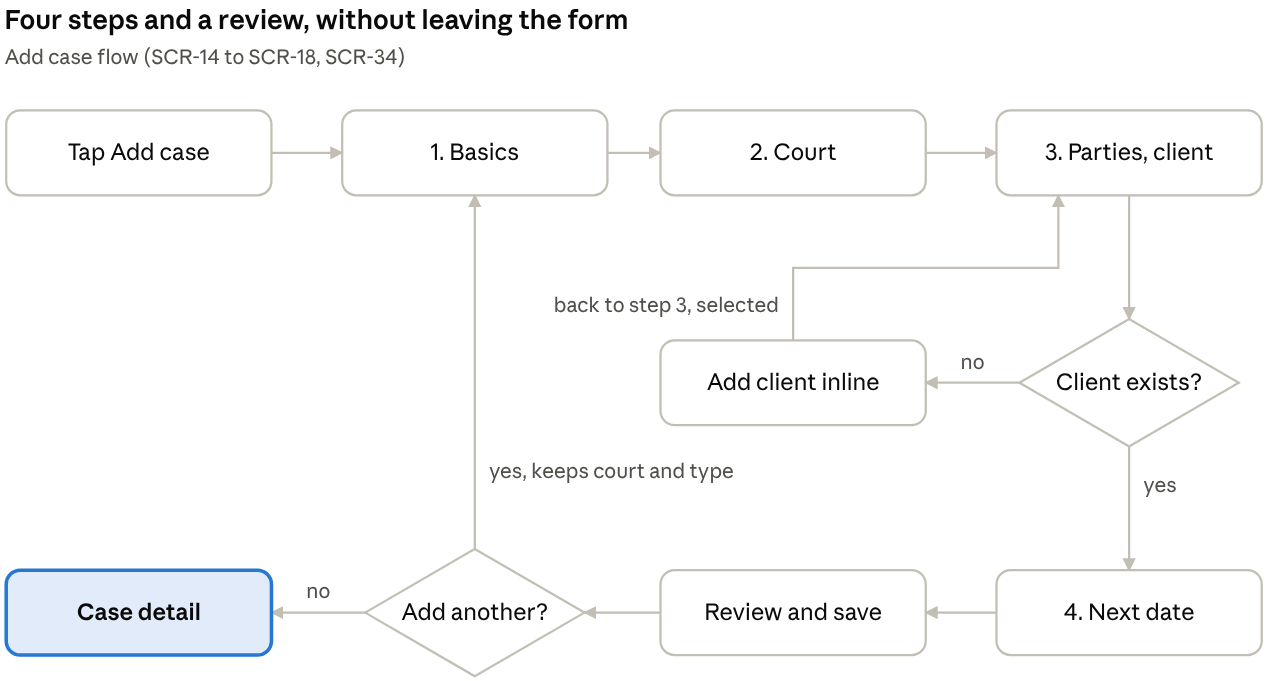

Flow 1 · first launch, sign-in, onboarding

Email sign-in (SCR-04) is a link on the phone screen and joins the same "Profile done?" check. Denying notifications still continues to Home; a banner in Settings offers to enable them later.

## Flow 2: Add a case

Adding a case is a 4-step modal with a review; the target is under 90 seconds. Entry points: FAB on Cases, "Add case" quick action on Home, and the empty state on Cases.

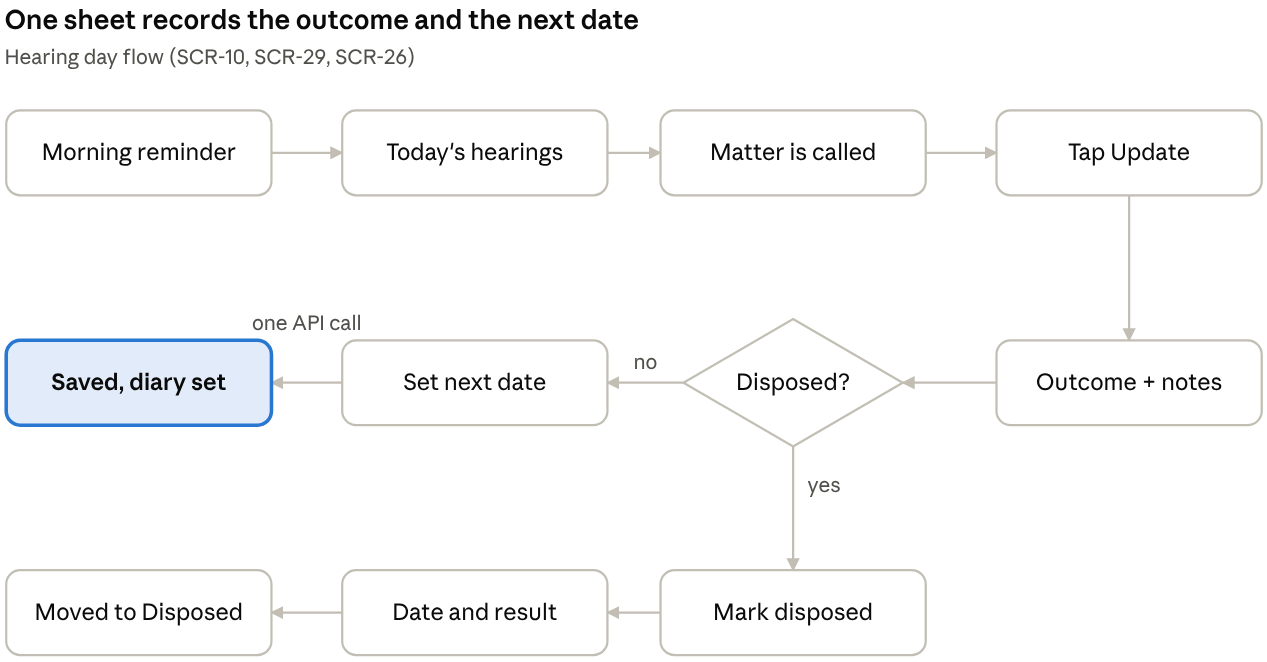

Flow 2 · add a case, 4 steps + review

| Step | Fields | Required |
|---|---|---|
| 1. Basics | Case title, case no., year, case type, CNR | Case type |
| 2. Court | Court, court room, judge, filing date | Court |
| 3. Parties, client | Our side, petitioner, respondent, opposite counsel, client(s) | Our side, client |
| 4. Next date | Stage, next hearing date (quick chips), purpose, priority | None (warning if no date) |

The draft auto-saves at every step; closing the modal asks "Discard draft?". A validation error on Review jumps back to the step that holds the field. Saving calls `POST /cases` with an `Idempotency-Key`, so a retry after poor signal never creates a duplicate.

## Flow 3: Hearing day

The core loop of the app: the advocate records what happened and the next date in under 30 seconds, standing outside the courtroom. Saving calls `POST /hearings/:id/outcome`, which closes the current hearing and creates the next one atomically.

Flow 3 · hearing day, outcome and next date

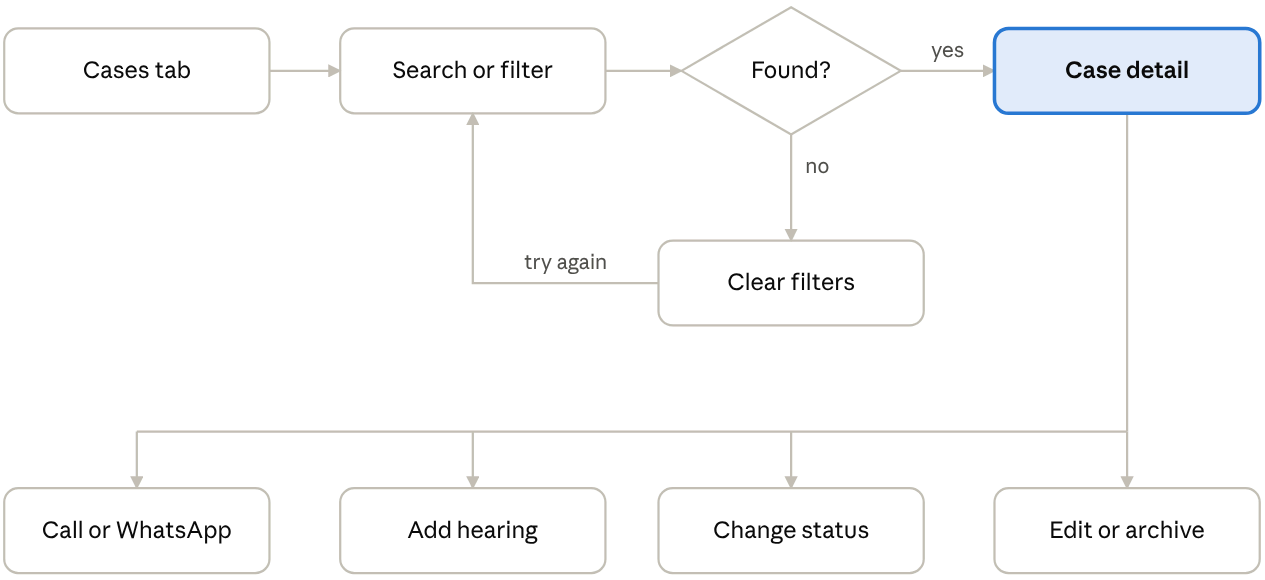

- **Outcome chips:** Adjourned, Heard, Arguments done, Evidence recorded, Order reserved, Disposed, Not reached, Other.
- **Next-date chips:** +1 week, +2 weeks, +1 month, Pick date. "Order reserved" lets the advocate skip the date and sets status to Reserved for order.
- **Missed update:** at 6 PM, any of today's hearings without an outcome triggers a "Needs update" push that deep-links to Today's hearings.
- **Other entry points:** the hearing card on Calendar day view, the Hearings tab of case detail, and the reminder notification itself.

## Flow 4: Find a case and act on it

When a client calls, the advocate reaches the case in two taps: search by case no., party, client or court, or tap a filter chip. Dashboard stat cards also open the list pre-filtered.

**Every action on a case starts from case detail**

Find and act flow (SCR-11, SCR-12, SCR-19 to SCR-27)

Flow 4 · find a case and act on it

| Action from case detail | Opens | Result |
|---|---|---|
| Call or WhatsApp | Device dialer / `wa.me` link | Leaves app, returns on back |
| Add hearing | Sheet SCR-30 | Timeline and next date update |
| Change status | Sheet SCR-26 | Pill changes; Disposed asks date and result |
| Edit or archive | Modal SCR-25 / action sheet SCR-27 | Archive hides from default list with 5 s Undo |
| Delete | Dialog SCR-28 | Type the case no. to confirm; soft-deleted 30 days |
| Documents, Notes, Fees, Tasks (P1) | Tabs SCR-21 to SCR-24 | Per-tab add buttons |
